Summary

Computer Science undergraduate with strong foundations in Data Structures & Algorithms, Object-Oriented Programming, REST APIs, and backend development. Currently leading faculty data modules in PRAJNA, an AI-powered faculty management platform built using AWS serverless architecture and modular system design principles. Experienced in database integration, API testing using Postman, asynchronous workflows, and collaborative SDLC-based development. Strong interest in scalable backend systems, cloud technologies, and software engineering.

Skills

Languages: Java, Python, JavaScript, SQL, C

Frontend: HTML, CSS, JavaScript, React.js (Basics)

Backend: FastAPI, REST APIs, Node.js(basics), API Integration, Modular Architecture, Async Programming

Databases: MySQL, MongoDB, SQLite, DynamoDB

Cloud & Tools: AWS, Render, Postman, Git, GitHub, VS Code, IntelliJ

Core CS: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, DBMS, Computer Networks, SDLC

Concepts: Debugging, Exception Handling, Database Integration, Serverless Architecture, Problem Solving

Projects

Banking Simulator

Sep 2025 - Nov 2025

Core Java | SQLite

[GitHub](#)

- Developed a modular banking management system using Java, JDBC, and SQLite with CRUD operations and transaction management.
- Implemented account handling, deposits, withdrawals, and transaction history modules with ACID-compliant database operations and exception handling.
- Optimized debugging and validation workflows to improve reliability and maintainability of backend operations.

Open Source Voice AI

Jan 2026

Python | MongoDB

[Deployed link](#)

- Developed and deployed a full-stack AI-powered voice processing application using Python, MongoDB, and Render.
- Designed backend workflows for real-time input processing, asynchronous audio generation, and database interaction.
- Integrated frontend and backend components with modular architecture, API workflows, functional testing, and debugging practices.

Leadership & Technical Experience

PRAJNA – AI-Powered Faculty Management Platform

Faculty Data Modules Lead

- Leading faculty data modules in a 24-member engineering project using AWS serverless architecture, REST APIs, and modular backend design.
- Working on profile management workflows involving JWT authentication, DynamoDB schema planning, async processing, Postman API testing, and event-driven integration concepts.
- Participating in SDLC activities including LLD documentation, debugging, integration planning, and collaborative development workflows.

GitHub Tech Club

President of the club

- Leading technical workshops, collaborative coding initiatives, and open-source activities as part of the GitHub Tech Club.

GirlScript Summer of Code 2026

Ambassador & Contributor

- Contributing to open-source initiatives and community-driven development programs while supporting technical engagement activities.

Internships & Certifications

Infosys springboard virtual Internship

September 2025-November 2025

- Developed a CLI-based banking simulator using Core Java and JDBC, focusing on OOP concepts and database operations.

Google Cloud Arcade

Aug 2025 – Sep 2025

- Completed hands-on labs in cloud infrastructure, networking, and deployment.

Achievements

Achievements: NTSE Scholar (Cleared Stage 1 & 2 conducted by NCERT) — Top 5 Finalist – AI Agent Building Competition by Lyzr AI (2025)

Education

B.Tech CSE, Gandhi Institute of Technology and Management (2023–2027) — CGPA: 9.59/10 PUC, IIIT RK Valley — 10/10 — SSC, Sri Chaitanya Techno School — 596/600
